In general, AspenTech aspenONE® software license agreements with customers permit use of the licensed software on Supported Computers at customer Sites. "Supported Computers include computers with a manufacture, model and operating system for which AspenTech offers a supported version of the software, and that are controlled by the customer. "Sites" are customer facilities or locations specified in the license agreement. AspenTech permits customer use of licensed aspenONE software in the cloud where: (i) the Platform Support specifications published by AspenTech for the relevant version of the software product include cloud support; (ii) only the customer has access to the licensed software product include cloud service provider, and (iii) the user is accessing the software only from a Site specified in the applicable license agreement. Cloud deployment does not change any license restrictions, including the restrictions on which regions can access the software.	Manageme following p Aspen F Analytics Perform Insights, Aspen Un	E Asset Perfent suite con roducts: Asp ProMV, Aspe, A Spen Mte hance Manag Aspen Unsc scrambler H Process Pulso	sists of the oen Fidelis n Event II, Aspen gement rambler, IS, Aspen
When running software on a virtual machine, the machine should meet the same requirements. AspenTech does not support the in-place upgrade of the Operating System (for example: upgrade Windows 7 to Windows 10) with AspenTech software already installed. Our recommendation is to uninstall Aspen Software before upgrading the OS and reinstall it after the upgrade. Your Aspen SLM Server must be installed and running prior to installing any V14 product. If running standalone, 1280 x 800 is the minimum recommended resolution monitor for			
For SLM server using Type 1 Desktop configuration, the minimum memory is 4GB with 20GB hard drive. Microsoft Active Directory/Domain Services (Required for aspenONE Web Server) A minimum of 10GB of free space is needed to install/upgrade products on the C drive.			
† This configuration is only practical for small scale models and deployments. For most applications, best deployment practice dictates the use of a separate and dedicated database server for acceptable performance			
EDR does not use any database servers. Deploys its own LocalDB database files. Aspen Batch Process Developer does not support the 64-bit version of Visio. Visio is used in ABPD to generate the block diagram and process flow diagram reports; it is an optional feature. The 64-bit versions of Word and Excel are fully supported by ABPD.			
4 When Aspen Utility model is driven by Aspen Online using Local System Account, then SQL Express 2014 is required.			
5 When Exchanger Design and Rating is driven by Aspen Online using Local System Account, then SQL Express 2014 is required			
Aspen Modeler family supports FORTRAN compiler version 2020			
Oracle or AdoptOpenJDK Java is needed if the 3rd party scheduling application Primavera is used with Economic Evaluation (EE). Primavera is owned by Oracle and its API uses Java.			
Must be in compatibility mode for Aspen Process Sequencer			
See "Basic Deployment Recommendations" in Appendix C of the Aspen Manufacturing Suite Advanced Process Control Installation Guide.			
10 For new installations of APC Web Server, install IIS and JRE before installing APC Web
